

## **Product Specification**

Part No.: SCJ-0354

1) Rating: DC 30V 0.3A

2) Operating Temperature Range:  $-10^{\circ}\text{C} \sim +60^{\circ}\text{C}$ 

## 3) Electrical Performance:

|                       | Test Conditions                     | Performance                                 |  |  |
|-----------------------|-------------------------------------|---|--|--|
| Contact Resistance    | Measured at small current (10mA     | 50mΩ Max.                                   |  |  |
|                       | 1000Hz or less)                     |   |  |  |
|                       | Apply a voltage of 500V DC          |   |  |  |
|                       | shall be applied for 1 minute after |   |  |  |
|                       | which measurement taken:            |   |  |  |
|                       | (1) Between terminals not to        |   |  |  |
| Insulation Resistance | be contact                          | 100MΩ Min.                                  |  |  |
|                       | (2) Between body and                | TOOMIS2 WIIII.                              |  |  |
|                       | terminal                            |   |  |  |
|                       | (3) Between terminals not to        |   |  |  |
|                       | be contact when plug is             |   |  |  |
|                       | inserted                            |   |  |  |
| Dielectric Strength   | AC500V rms (50-60Hz) for 1          |   |  |  |
|                       | minute trip current: 0.5mA          |   |  |  |
|                       | (1) Between terminals not to        |   |  |  |
|                       | be contact.                         | Without damage to parts arcing or breakdown |  |  |
|                       | (2) Between body and                |   |  |  |
|                       | terminal                            |   |  |  |
|                       | (3) Between terminals not to        |   |  |  |
|                       | be contact when plug is             |   |  |  |
|                       | inserted.                           |   |  |  |

## 4) Mechanical Performance:

|                   | Test Conditions                         | Performance                          |  |
|-------------------|---|--------------------------------------|--|
| Insertion Force   | Measurement shall be made after 3       |                                      |  |
| msertion roice    | times of insertion and extraction with  | 600~1600 gf                          |  |
|                   | gauge plug                              |                                      |  |
|                   | Measurement shall be made after 3       |                                      |  |
| Extraction Force  | times of insertion and extraction with  | 400~1200 gf                          |  |
|                   | gauge plug                              |                                      |  |
|                   | A static load of 150gf shall be applied | Electrical characteristics shall be  |  |
| Terminal Strength | to the terminal for 15 seconds in any   | satisfied without damage or          |  |
|                   | direction                               | excessive looseness of terminals     |  |
| Life Test         | Endurance without load:                 | (1) Contact resistance: 100mΩ        |  |
|                   | Jack shall be subjected to 5,000        | Max.                                 |  |
|                   | cycles at a rate of 15 to 18 cycles per | (2) Insulation Resistance: 50MΩ Min. |  |
|                   | minute without loading.                 | (3) Withstand Voltage: AC 500V       |  |

|  | (4) | for 1 minute. Without damage to parts |
|--|-----|---------------------------------------|
|  |     | arcing or breakdown.                  |

## 5) **Environmental Characteristics:**

| 5) Environmental Characteristics: |  |                                     |  |  |  |
|-----------------------------------|--|-------------------------------------|--|--|--|
|                                   | Test Conditions                        | Performance                         |  |  |  |
|                                   | The top of terminals shall be          | The Area of soldering should be     |  |  |  |
| Solderability Test                | dipped 2mm in the solder bath of       | over 75%                            |  |  |  |
| •                                 | 230±5°C for 3±0.5 seconds              |                                     |  |  |  |
| D :                               | Solder iron method: temperature        | Without deformation of case or      |  |  |  |
|                                   | of solder 350±10°C. Time of            | excessive looseness of terminals    |  |  |  |
| Resistance to Solder Heat Test    | solder 3±0.5 sec.                      | electrical characteristics shall be |  |  |  |
|                                   |  | satisfied.                          |  |  |  |
|                                   | The jack shall be stored at a          |                                     |  |  |  |
|                                   | temperature of -25± 3°C for 48         |                                     |  |  |  |
|                                   | hours, then the switch shall be        |                                     |  |  |  |
| Cold Test                         | maintained at standard                 |                                     |  |  |  |
|                                   | atmospheric conditions for 1 hour      |                                     |  |  |  |
|                                   | after which measurement shall be       |                                     |  |  |  |
|                                   | made                                   | There shall be no deformation or    |  |  |  |
|                                   | The jack shall be stored at a          | cracks in the molded part.          |  |  |  |
|                                   | temperature of 70±2°C for 48           |                                     |  |  |  |
|                                   | hours, then the jack shall be          |                                     |  |  |  |
| Heat Test                         | maintained at standard                 |                                     |  |  |  |
|                                   | atmospheric conditions for 1 hour      |                                     |  |  |  |
|                                   | after which measurement shall be       |                                     |  |  |  |
|                                   | made.                                  |                                     |  |  |  |
| Humidity Test                     | The jack shall be stored at a          |                                     |  |  |  |
|                                   | temperature of 40±2°C and a            |                                     |  |  |  |
|                                   | humidity of 90% to 98% for 48          |                                     |  |  |  |
|                                   | hours, then the jack shall be          | There shall be no deformation or    |  |  |  |
|                                   | maintained at standard                 | cracks in molded part.              |  |  |  |
|                                   | atmospheric conditions for 1 hour      |                                     |  |  |  |
|                                   | after which measurement shall be       |                                     |  |  |  |
|                                   | made.                                  |                                     |  |  |  |
| Te                                | st Condition (Unless otherwise specifi | ied)                                |  |  |  |
|                                   | Temperature: 5°C - 35°C                |                                     |  |  |  |
|                                   | Humidity: 45% - 85% R.H.               |                                     |  |  |  |
|                                   | Duagana, 06 1061-Da                    |                                     |  |  |  |

Pressure: 86 – 106kPa
